

TRACMASTER

Landscape • Groundcare • Conservation

Power Unit & Snow Plough

RISK ASSESSMENT

HAZARDS	RISK LEVEL	ACTION NEEDED
General		The machine should only be used by trained operators.
Machine tipping over	Low	Do not use on slopes over 25°. Work across slopes, never up and down.
Machine running away	Low	Operator presence control turns off the engine if the operator releases the handlebars. Always check operation before use.
Machine reversing and jamming the operator against an immovable object	High	Never reverse the machine with your back to a wall or similar object.
Burns	High	Be very careful of a hot exhaust. Turn off the machine before re-fuelling. Allow 1" air space in fuel tank.
Foot injuries	High	Never let anyone stand in front of the machine when it is operating. Keep all pets and animals away.
Handlebar adjustment	Low	Always set the height and sideways position before operating the machine – never while it is moving.
Transportation	Low	Always transport the machine at speeds suitable for the surroundings. Be aware of pedestrians and other obstacles. Ensure the travel speed allows time for the machine to be safely brought to a standstill.
Plough Angle Adjustment	Medium	Always set the sideways position before operating the machine and with the engine turned off – never while it is moving.
